

1     Abstract

2       A low profile engine/generator set has dimensions suitable for  
3       being placed in an enclosure hung on the frame of a vehicle. The  
4       enclosure may serve as a step for ingress and egress from the  
5       vehicle. To reduce the space required for a generator and engine  
6       to fit within such an enclosure, the components are rigidly  
7       coupled together with a base plate. The base plate serves as the  
8       floor of the enclosure.
